## Buying Wallpaper

ExampLe Gloria plans to paper her bedroom, which measures $9^{\prime} \times 12^{\prime} \times 8^{\prime}$. Each double roll of wallpaper covers 144 sq ft . How many double rolls of wallpaper should she buy?

Step 1 Find the perimeter of the floor $9^{\prime} \times 12^{\prime}$.

$$
\begin{aligned}
P & =2\left(9^{\prime}+12^{\prime}\right) \\
& =2\left(21^{\prime}\right) \\
& =42^{\prime}
\end{aligned}
$$

Step 2 Find the area of the 4 walls. Multiply the perimeter by the height.

Step 3 Divide the area by 144 square feet to find the number of rolls needed.
$2 \begin{aligned} & 2 \\ & \text { Double rolls of wallpaper }\end{aligned}$
$1 4 4 \longdiv { 3 3 6 }$ Area of room
$-\frac{288}{48}$ Square feet remaining

Gloria should purchase 3 double rolls of wallpaper.

Directions Calculate the number of double rolls of wallpaper needed to paper each of these rooms. The third measurement for each room is the height.

|  | Dimensions of Room | Area of Walls | Double Rolls |
| :---: | :---: | :---: | :---: |
| 1. | $7.5^{\prime} \times 9.5^{\prime} \times 8^{\prime}$ |  |  |
| 2. | $14^{\prime} \times 15^{\prime} \times 10^{\prime}$ |  |  |
| 3. | $15^{\prime} \times 11^{\prime} \times 8^{\prime}$ |  |  |
| 4. | $19^{\prime} \times 17^{\prime} \times 8^{\prime}$ |  |  |
| 5. | $8.5^{\prime} \times 11.5^{\prime} \times 8^{\prime}$ |  |  |
| 6. | $22^{\prime} \times 11^{\prime} \times 8^{\prime}$ |  |  |
| 7. | $15.5^{\prime} \times 18.5^{\prime} \times 10^{\prime}$ |  |  |
| 8. | $9^{\prime} \times 11.2 \times 10^{\prime}$ |  |  |
| 9. | $12.9^{\prime} \times 23.8^{\prime} \times 8^{\prime}$ |  |  |
| 10. | $30^{\prime} \times 18^{\prime} \times 8^{\prime}$ |  |  |
