

## Buying Paint

ExAMPLE Robert is at the hardware store and must decide whether to buy paint in 18 individual quart cans or to buy it in both gallon and quart cans. Here are the facts:
4 quarts $=1$ gallon 1 quart costs $\$ 3.89 \quad 1$ gallon costs $\$ 14.95$ What should Robert do?

Step 1 Find the cost of 18 quarts.
$\$ 3.89$
$\begin{array}{r}\$ 3.89 \\ \times \quad 18 \\ \hline \$ 70.02\end{array}$

Step 2 Find out how many gallons to buy.

4 Gallons
$4 \longdiv { 1 8 }$
$-\frac{16}{2}$ Quarts
Four gallons and 2 quarts are equal to 18 quarts.

Step 3 Find the cost.
$\$ 14.95$ Cost per gallon
$\frac{\times \quad 4}{\$ 59.80}$ Cost of 4 gallons
\$3.89 Cost per quart
$\frac{\times \quad 2}{\$ 7.78}$ Cost of 2 quarts
$\$ 59.80$ Cost of 4 gallons
+7.78 Cost of 2 quarts
$\$ 67.58$ Total cost

Robert should purchase 4 gallons and 2 quarts.

Directions Copy and complete this chart. Remember: 1 gallon costs $\$ 14.95$ and 1 quart costs $\$ 3.89$.

|  | Quarts Required | Amount to Buy |  | Cost |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Gallons | Quarts | Gallons | Quarts | Total |
| 1. | 13 |  |  |  |  |  |
| 2. | 75 |  |  |  |  |  |
| 3. | 22 |  |  |  |  |  |
| 4. | 12 |  |  |  |  |  |
| 5. | 11 |  |  |  |  |  |
| 6. | 5 |  |  |  |  |  |
| 7. | 30 |  |  |  |  |  |
| 8. | 59 |  |  |  |  |  |
| 9. | 45 |  |  |  |  |  |
| 10. | 15 |  |  |  |  |  |
