Comparing Unit Prices

EXAMPLE

Bennett compares different brands of a product to decide which is the best buy. Which size has the lower unit price?

Brand A weighs 12.5 oz. Its price is \$1.59 Brand B weighs 22.5 oz. Its price is \$3.29

Step 1 Divide cost by weight.

Step 2 Compare cost per pound.

Period

Brand A \$.127 12.5) 1.59

Brand A unit price: 12.7¢ per oz.

Brand B \$.146 22.5 3.29

Brand B unit price: 14.6¢ per oz.

Brand A has the lower unit price. If the quality is equal in both products, then the best buy is A.

Directions Find the unit price of each product. Circle the lowest unit price in each set. Use the back of the paper to list any patterns you see in the exercises.
