write up Class Activity 10A

be sure to include the name of the book you used, a detailed description of your randomization scheme and any rules used, your numerical results for both word-length and sentence length (in each case tell me the mean $\bar{x}$, the standard deviation s and the interval computed in item #4)

be sure to give me, as best you can, an individualized answer to item #7

hang on to your raw data, I'll be asking you to input it into a shared spreadsheet tomorrow (to make it easy to graph)
